

# Sales Tax Exemption of Production Electricity

---

How much of your plant's electricity usage goes directly towards production?

Have you taken advantage of all available sales tax exemptions?

---

## How can Interstates help?

- Take an equipment inventory
- Measure electric load at various points within the electrical system
- Determine the percentage of that electricity going directly towards production
- Provide a findings and recommendations report signed by a professional engineer
- Work with your state's Department of Revenue to reconcile present and retroactive tax returns

---

*By monitoring the percentage of electricity going towards production, money can be retrieved from the past three and a half years through this sales tax exemption. More importantly, money can be saved for years to come.*

---

## Proven Results

*Recouped \$115,000 in back taxes for Golden Crisp food processing facility, while saving them an expected \$57,500 each upcoming year by segregating 77 percent of the electrical load that was contributing directly to production.*
